

Title

Cyber Security Shield

Project Name

Cyber Security Shield

Student Name

Subham

Objective

To understand cyber security and methods to protect digital systems and data.

Problem Statement

Cyber attacks such as phishing, malware, and hacking threaten personal and organizational information.

Research Findings

Firewalls, antivirus software, strong passwords, two-factor authentication, encryption and regular updates significantly improve security.

Methodology

Studied cyber threats, analyzed protection methods, and summarized best practices.

Tools Used

Computer, Internet, Antivirus Software, Firewall, Web Browser, Documentation Software.

Implementation

Configured strong passwords, enabled 2FA, updated software, used antivirus, and followed safe browsing practices.

Screenshots

Insert screenshots of antivirus dashboard, firewall settings, or 2FA setup here.

Results

The project demonstrates how basic cyber security measures reduce common online risks.

Challenges

Keeping up with evolving threats and user awareness.

Future Scope

Integration of AI-based threat detection and stronger security automation.

Conclusion

Cyber security is essential for protecting digital assets. Following security best practices helps create a safer online environment.
